AIR MEASURING AND CONTROL - INDOOR AIR QUALITY

Ruskin® model TDP05K is a highly accurate thermal dispersion airflow and temperature measuring probe. Multiple velocity and temperature points on one or more probes installed in the duct or plenum are averaged to arrive at air measurements. The TDP05K is capable of measuring a velocity range from 0 to 5,000 FPM and displaying the... [More>>>](#)

Increasing Automation in the Construction Industry

Challenges faced by the construction industry
The construction industry is grappling with issues pertaining to productivity and meeting project deadlines that have been intensified following the economic recession of 2008-2009. About 2 million construction workers were let go in the United States alone between 2007 and 2011, and the industry has not been able to fill this vacuum... [More >>>](#)

Cellphones negatively affecting jobsite productivity, safety

Construction company owners and managers are worried about liability issues, with some wondering who bears the responsibility when a worker gets injured because he or she wasn't paying attention. They argued that workers should take responsibility for their own safety.

One respondent recalled a worker who walked off the edge of a roof while talking on the phone. Luckily his harness prevented major injuries, but "the situation could have been fatal," he said. [More >>>](#)
