### NEW Product Spotlight: Tandem Chillers

Tandem Chillers Inc. manufactures both remove-for-service chillers and service-in-place chillers both where individual components can be replaced without shutting down the balance of the system -- all in the space of a few hours.

Modular chillers are ideal for those situations where accessibility and space are restricted, expansion is inevitable, where large cooling capacities and uninterrupted operation are required. Possible applications include... [More>>](#)

##### Office Building Constructed with Coronavirus-fighting Features

When it opens later this summer, a \$26 million Chicago office building will be one of the first in the country to boast features designed to address COVID-19 safety concerns.

The 90,000-square-foot Fulton East, which was under construction when the outbreak hit, has been engineered for maximum social distancing, touch-free operation and air and surface sanitization.

"As an under-construction, boutique office building, we fortunately had the opportunity to modify Fulton East's design in response to ... [More >>>](#)

##### How to Design Safer Offices in a COVID-19 World

Preventing the spread of COVID-19 was the motivation behind sending employees home to work during the pandemic. And it will be the same driving factor for employees' return to the office. What design preparations can be made to your office for operating in the new normal? What common sense safety measures can be adopted?

Given the gravity of the situation, some companies will need to have their offices retrofit, or undergo a more radical rebuild to keep employees safe, based on CDC health guidelines outlining social distancing and hygiene practices. [More >>>](#)
