HOT NEW Product Spotlight

 **TEMPMASTER®**

by  Johnson Controls

Dedicated Outside Air units

On average, we breathe in 3,400 gallons of air each day. Ambient indoor air pollution is a major problem, affecting health and productivity in the workplace. Bringing in fresh, outside air is absolutely critical to maintain indoor air quality. US companies lose billions annually because of sick employees. Fresh air results in fewer sick days and fewer sick kids, providing greater productivity.

Indoor air quality can affect long- and short-term health problems, including headaches, eye irritation, cough, allergic reactions, and even carbon monoxide poisoning.

A dedicated outside air system (DOAS) from TempMaster® delivers clean, dehumidified outside air in all weather and climate conditions. New standards for efficiency and high-performance green buildings continue to evolve. With a TempMaster® DOAS, you can meet ASHRAE requirements for ventilation and energy efficiency...[See More Features and Benefits>>>](#)

Material Shortages Significant Issue for Construction Contractors During Pandemic

More contractors are facing a shortage of building materials as the pandemic continues, according to new fourth-quarter data from the U.S. Chamber of Commerce Commercial Construction Index (Index). This quarter, 41% of contractors say less availability of building products and materials is a severe consequence of the pandemic, up from just 15% saying the same in Q3. [More>>>](#)
